

## PRESS RELEASE

FOR IMMEDIATE RELEASE

### **Revolutionary Machine in Austin Helps Individuals Lose up to 10 Inches Without Diet, Exercise, Pills or Surgery**

Austin, Texas (October 24, 2014) - **The days of sweating it out at the gym and going on endless crash dieting programs just to lose a few inches are over. This is as new Austin company, Skinny Beam, boasts a red light technology machine designed to help individuals lose 2 to 10 inches within 30 minutes. The machine delivers these amazing results without the need for surgery, diet pills or exercise.**

Skinny Beam is owned by DC Chiropractor, Dr. Don Salyer. When asked about the effectiveness of the machine, he said, "I know this is hard to believe. No surgery, no pills, no diet, no exercise. Lay down and lose inches. It is a safe and effective new technology and is just as effective as liposuction, without dangerous side effects."

Fitness instructor, Stephanie McDonald, has already experienced the amazing results of the red light technology at Skinny Beam. She lost 3.38 inches off her waist, hips and thighs in her first 30 minute session. She said, "I'm fitness professional but I've always struggled with losing weight on my lower half. I do diet and exercise very well but I still need some extra help. I plan on coming back for further treatments because the results were amazing."

For further information about how the machine works, or to view transformation results experienced by other individuals, visit [www.skinnybeam.com](http://www.skinnybeam.com)
